Molecular Diagnostics**PCR For Tuberculosis**

Sample Endometrial biopsy

Result: Negative

Comment:

- Polymerase chain reaction(PCR) for detection of tuberculosis is an in vitro nucleic acid amplification test for the detection of M. tuberculosis complex in human sputum, BAL, bronchial secretion, CSF, stomach fluid or peritoneal fluid.
- This test is indicated as an aid to diagnosis.
- Although rare, mutations within the highly conserved regions of the bacterial genome covered by the kit's primers and/or probe may result in under quantitation or failure to detect the presence of the bacteria in these cases.
