**Histopathology****Histo Biopsy - Endometrial**

**Histopathology Number:**  
**BB-859/21**

**Specimen Type:**  
Endometrial biopsy

**Clinical Data / Impression:**  
Infertility with low ovaries.

**Gross Description:**  
Single grey white soft tissue bit measuring 0.2 x 0.2 x 0.1 cm (ETP).

**Microscopic Examination & Impression:**  
- Sections show endocervical tissue with squamous metaplasia of endocervical glands.  
- Negative for malignancy.

*\*\* Slides & blocks for second opinion will be issued to the patient / attendant after 48 hours of submitting a formal request.  
(Time - between 3 pm to 5 pm) (Slides are chargeable).*

Kindly correlate with clinical findings

**Molecular Diagnostics****PCR For Tuberculosis**

Sample Endometrial Biopsy

Result: Negative

**Comment:**

- Polymerase chain reaction(PCR) for detection of tuberculosis is an in vitro nucleic acid amplification test for the detection of M. tuberculosis complex in human sputum, BAL, bronchial secretion, CSF, stomach fluid or peritoneal fluid.
- This test is indicated as an aid to diagnosis.
- Although rare, mutations within the highly conserved regions of the bacterial genome covered by the kit's primers and/or probe may result in under quantitation or failure to detect the presence of the bacteria in these cases.

**Note:**

Kindly correlate with clinical findings
