Hematology

APTT (Partial Thromboplastin Time), Citrate Plasma, Sodium Citrate

Date	07/Mar/2022 01:23PM	Unit	Bio Ref Interval
APTT	30.7	Sec	25.3 - 34.3
Control	29.8	Sec	

Interpretation

(Activated Partial Thromboplastin Time; PTT)

APTT is the test which checks the "intrinsic coagulation" pathway and is useful for detecting screening of haemophilia A & B, screening of coagulation inhibitors like lupus anticoagulant.

APTT can also be used to monitor heparin monitoring.

Raised APTT is found in - Liver disease, DIC, heparin treatment, circulating inhibitors (Lupus Anticoagulant), and haemophilia (deficiency of Factor VIII & IX).

Low APTT may be seen in - high concentration Factor VIII and is independent risk factor for increased incidence of thrombus formation.

Advice: - 'APTT mixing study', 'Lupus Anticoagulant test', 'specific Factor(s) assay' may be added on for further evaluation.

Prothrombin Time (with INR), Citrate Plasma

Date	07/Mar/2022 01:23PM	Unit	Bio Ref Interval
Prothrombin Time (PT) Photo-Optical-Nephelometry	10.9	Sec	9.7 - 13.3
MNPT Value	11.9	Sec	
INR	0.92		

Interpretation

(Syn: - Prothrombin Time)

PT is the test which checks the "extrinsic coagulation" pathway and is useful for detecting coagulation deficiency, liver disease and disseminated intravascular Coagulation (DIC).

PT can also be expressed as International normalized ratio (INR) used for monitoring warfarin therapy.

Raised PT value seen in - factor deficiency (Fibrinogen (I), Prothrombin (II), factor V, VII, X), oral anticoagulation therapy, liver diseases, Vitamin K deficiency and DIC.

Advice: - 'PT mixing study', 'specific factor(s) assay' may be added on for further evaluation.
