**Histopathology****Histo Biopsy - Endometrial****Histopathology Number:****BB-958/21****Specimen Type:**

Endometrial biopsy

**Clinical Data / Impression:**

Primary infertility with h/o IVF failure

**Gross Description:**

Multiple grey brown soft tissue bits altogether measure 1 x 1 x 0.3 cm (ETP).

**Microscopic Examination & Impression:****Proliferative endometrium.****Granulomas / atypia - Not seen.**

*\*\* Slides & blocks for second opinion will be issued to the patient / attendant after 48 hours of submitting a formal request.  
(Time - between 3 pm to 5 pm) (Slides are chargeable).*

Kindly correlate with clinical findings

**\*\*\* End Of Report \*\*\*****Dr. Nishu Bhardwaj MD, DNB**

Consultant - Histopathology

Conditions of Reporting: 1. The tests are carried out in the lab with the presumption that the specimen belongs to the patient name as identified in the bill/test request form. 2. The test results relate specifically to the sample received in the lab and are presumed to have been generated and transported per specific instructions given by the physicians/laboratory. 3. The reported results are for the information and interpretation by the referring doctor only. 4. Some tests are referred to other laboratories to provide a wider test menu to the customer. 5. Max Healthcare shall in no event be liable for accidental damages loss, or destruction of specimen which is not attributable to any direct and mala fide act or omission of Max Healthcare or its employees. Liability of Max Healthcare for deficiency of services, or other errors and omissions shall be limited to fee paid by the patient for the relevant laboratory services.

**Molecular Diagnostics****PCR For Tuberculosis**

Sample Endometrial Tissue

Result: Negative

**Comment:**

- Polymerase chain reaction(PCR) for detection of tuberculosis is an in vitro nucleic acid amplification test for the detection of M. tuberculosis complex in human sputum, BAL, bronchial secretion, CSF, stomach fluid or peritoneal fluid.
- This test is indicated as an aid to diagnosis.
- Although rare, mutations within the highly conserved regions of the bacterial genome covered by the kit's primers and/or probe may result in under quantitation or failure to detect the presence of the bacteria in these cases.

**Note:**

Kindly correlate with clinical findings
