Thyroid Peroxidase Antibody (TPO)	283.6	IU/mL	1 -16
-----------------------------------	-------	-------	-------

Comment Interpretation

This is an immunoassay for the in vitro quantitative determination of antibodies to thyroid peroxidase in human serum and plasma. The anti-TPO determination is used as an aid in the diagnosis of autoimmune thyroid diseases. Samples should not be taken from patients receiving therapy with high biotin doses (i.e. > 5 mg/day) until at least 8 hours following the last biotin administration. The results should always be assessed in conjunction with the patient's medical history, clinical examination and other findings.

Kindly correlate with clinical findings

Increased in primary Hypothyroidism.
Decreased in primary Hyperthyroidism

Total Thyroid Profile : (Thyroid Function Test, TFT)
T3 (Total), Triiodothyronine
Increase in Hyperthyroidism, and T3 toxicosis,
Decreased in hypothyroidism, states with decreased TBG, and acute and subacute non thyroidal illness
T4(Total) Thyroxine
Increased in Hyperthyroidism, states with increased TBG, Thyrotoxicosis
Decreased in Hyperthyroidism, states with decreased TBG and Strenuous exercise
TSH, Serum : Thyrotropin(Thyroid Stimulating Hormone)
Increased in primary Hypothyroidism.
Decreased in primary Hyperthyroidism.

Note : TSH levels are subject to circadian variation, reaching peak levels between 2 – 4 am and at a minimum between 6 – 10 pm. The variation is of the order of 50% - 206 %, hence time of the day has influence on the measured serum TSH concentrations.
TSH assay is standardized to the 3rd generation for human TSH.
The Cyclical variations may be quite large; therefore the timing of specimen collection must be strictly controlled.
Advise : Kindly do Thyroid Profile/TSH in morning hours only.
